transit

Environmental. On Track. On Time. Our team of engineers and compliance specialists offers practical strategies and solutions to drive environmental efficiencies, issues mitigation, and planning resilience for transit operations across the United States. With 30 years of experience, we're the trusted advisor on environmental and energy matters for the largest public transit providers in North America.

▶ **Phase I Environmental Site Assessments (ESAs)**

Upon contract award, transit operators become responsible for managing fleet maintenance facilities. Phase I ESAs are a critical tool for managing risk prior to entering a lease agreement.

▶ **Stormwater Permitting and Pollution Prevention Plan (SWPPP) Development**

Most states require the transportation sector to be covered under an Industrial Stormwater Discharge Permit or to file for an exclusion from permitting. Development of an SWPPP is a permit requirement that helps a facility minimize the potential for pollutants to migrate off-site via stormwater runoff.

▶ **Stormwater Regulatory Compliance Monitoring, Reporting, & Training**

Employee training is another permit requirement that equips staff with knowledge of how to manage stormwater pollution risks and how to respond to a spill. Most states also require semiannual or quarterly stormwater monitoring and reporting.

▶ **Spill Prevention, Control, and Countermeasures (SPCC) Plan Development**

The USEPA requires facilities that maintain 1,320 gallons of oil in containers 55 gallons or greater to develop an SPCC Plan that outlines spill prevention and response procedures.

▶ **Chemical Inventory Reporting**

Chemical inventories maintained above a certain threshold at a facility are subject to reporting to local and state reporting

▶ **Storage Tank Permitting**

Most states require certain aboveground and underground storage tanks to be permitted prior to installation.

Entech has been a critical partner in helping our team diagnose and remediate potential issues. They are extremely responsive and can service our locations nation-wide.

**Director of Mergers & Acquisitions
Rail, Bus & Transit Industry**

▶ **Site Investigations & Remediation**

Many transportation sites have utilized petroleum-based automotive fluids and fuels for decades, which creates the potential for subsurface contamination.

▶ **Regulatory Compliance Auditing**

Uncertain as to which regulations apply to you and when? A comprehensive investigation of all regulatory obligations pertinent to a facility is a good place to start.

▶ **Energy Assessments & Sustainability**

Reducing your energy use is an investment that can pay back dividends to your bottom line and environment.

▶ **Compliance Management System**

Software solutions to track all of your regulatory compliance reports and assets.
