Entech Announces Move to The Gateway Building

Reading, PA – Entech Engineering, Inc. (Entech) today announced that they will be moving their corporate offices to the Gateway Building located at the corner of 2nd and Penn Streets in Reading, PA. The move to a larger office space, scheduled for early May, will allow the company to continue to support its growing operations. For the past 20 years the company's headquarters have encompassed several floors within the American House also located in Reading, at 4 S. Fourth St.

About the move, Entech's president, Jeff Euclide, said, "This expansion is very exciting for us. While we like our current facility, we just have no more room to grow. With the move to the 3rd floor of the Gateway Building we will have more than 24,000 SF of office space which will allow us to better bring together our engineering, architectural, and environmental services in a more collaborative setting. Since Entech was formed in 1981, our operations have been located in Reading, and we feel fortunate to have found such quality office space within the City. So much great work has been accomplished to create the Entertainment District at the City entrance, including the Goggleworks and the expanding RACC campus. It will be an exciting place for both our employees and our clients."

About Entech:

Entech's full-service engineering and architectural team helps its clients make more informed decisions for their facilities and infrastructure operations. Within its 5 offices, Entech employs over 100 professionals who serve customers in the municipal, higher education, manufacturing, and natural gas markets.
