Entech to Co-Present on Utility Master Planning at KAPPA Conference

READING, PA - We are excited to announce that we will be co-presenting at the 2015 Spring KAPPA, Keystone chapter of APPA (Association of Physical Plant Administrators) on April 8th.

We will be co-presenting "Understanding Your Campus Utility Master Plan" with Susquehanna University. Making informed decisions for your campus' critical utilities, to ensure capacity, efficiency, and alignment with the campus' vision is imperative. The presentation will give campus facility managers methods on how to better examine and understand their complex campus utilities' challenges, and evaluate solutions through data calculations and a variety of additional concerns, to ultimately choose and implement improvements that are best for their campus.

Susquehanna University's recent heating utility master plan will serve as the backdrop and real-world case study for the presentation.

Presenters will be: Bryan Haag, PE, Principal at Entech Engineering, Inc. and Chris Bailey, PE, CSP, Director of Facilities Management for Susquehanna University.

More information on KAPPA can be found here: <http://www.erappa.org/KAPPA/index.html>
